

Theme: Get GigggleGit demo into a stable enough alpha to start onboarding some adventurous clients

Epic: Onboarding experience

1. User story:

1. As a vanilla git power-user that has never seen GigggleGit before, I want to import my existing repositories to GigggleGit's repositories conveniently.
  2. As a team lead onboarding an experienced GigggleGit user, I want to grant them appropriate access and permissions in a safe and efficient way.
  3. As a new user that has no experience on version-control software, I want to visualize the project timelines clearly.
- Task: Version timeline visualization:
    - Ticket 1: Implement core timeline view
      - Create a timeline representation of the project's entire commit history, represent commits as nodes.
    - Ticket 2: Develop advanced UI interactions
      - Show basic commit information such as author, date, comments when hover with mouse.
      - Create a detailed view panel that displays commit information when commit is clicked
      - Develop a search feature to locate specific commits.
  - This is not a user story because it does not describe what user needs from the user's perspective; instead it describes a specific feature that the product should have. Therefore, this is a functional requirement.
